\*\* Data source: demographic calculations and Labour Force Survey 2010

The last Census in BiH was taken in year 1991 and therefore we do not have the exact figures on the population in BiH. The number of residents is estimated based on surveys (e.g. , Labour Force Survey- LFS, Household Budget Survey- HBS) and through demographic calculations.

## POPULATION

For the census conducted earlier in our country, the official results referred to the so-called resident population, i.e. population who reside in the territory of Bosnia and Herzegovina, regardless of whether at the critical moment of the census, the persons were present at the place of residence or were temporary absent, in the country or abroad, due to some other reasons .

In the Population Census in 1961 and 1971 as a resident population persons were registered at the place where they worked at the Census moment, while in the 1981 and 1991 Census these persons were enumerated as a resident population in the places where their families lived.

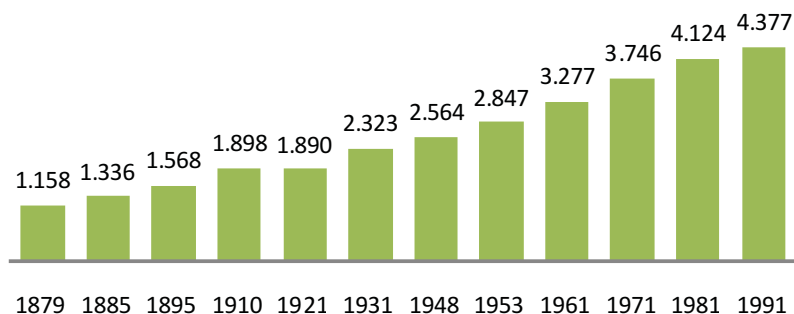

For the next Census of Population, Households and Dwellings, for the enumeration units new definitions will be used, which are in accordance with the Conference of European Statisticians Recommendations for the 2010 Censuses of Population and Housing and Regulation (EC) No. 763/2008 of the European Parliament and of the Council.

**Natural change** is the difference (surplus or deficit) between the number of births and the number of deaths in a given period.

**Births and deaths:** according to the legal regulations on registration, events of births and deaths are obligatory registered in population registers of the area where they took place, irrespective of the residence of the persons.

### BIRTHS IN SOME BALKAN COUNTRIES AND IN EU-27

2008 and 2009, per 1.000 inhabitants

### TOTAL FERTILITY RATE IN BiH

1996-2009

**The total fertility rate (TFR)** is the number of children that would be born alive to a woman during her childbearing years, if she were to pass through all her childbearing years conforming to the age-specific fertility rates of a given year.

**A liveborn child** is every child that breathes at birth or shows any other signs of life (beating of the heart, pulsation of the umbilical cord, definite movements of voluntary muscles).

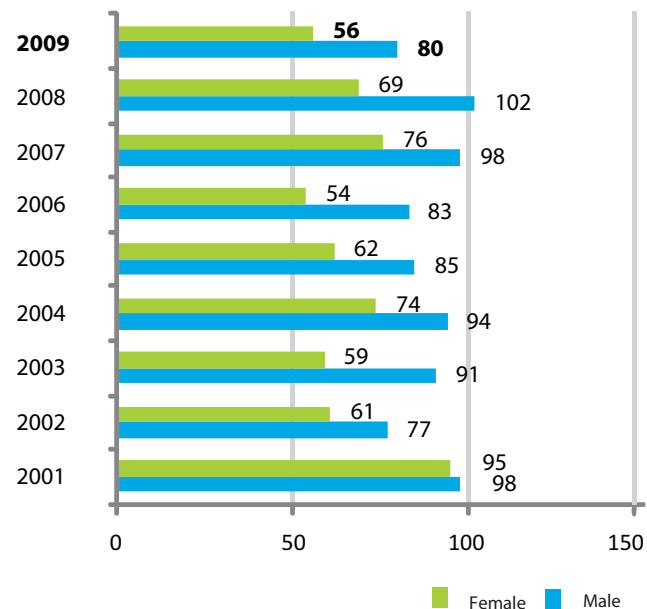

## POPULATION

**Stillborn** is considered a child delivered, or extracted from its mother displaying no signs of life, that is if it didn't breath or display any other signs of life, and was carried longer than 22 weeks (approximately 6 months) with more than 500 g birthweight.

### AVERAGE AGE OF THE DECEASED IN BiH

**A dead person** is every liveborn person in which there is a permanent disappearance of all evidence of life at any time after live birth has taken place, without capability of resuscitation. Stillbirths are not included here.

**Place and determination of death:** By this characteristic, the deceased are classified based on whether the person died in a health institution or some other place (house, field etc.). If the death occurred in a health institution then it is considered that a physician determined the death, if elsewhere then the deceased are classified based on whether a physician determined the death or some other person.

## CONSUMER PRICE INDEX IN BiH BY COICOP GROUPS IN YEAR 2009

**The Consumer Price Index** allows us to measure the consumer price inflation, that is the rate of change of the consumer prices of goods and services purchased by the households through monetary transactions in the economic territory of Bosnia and Herzegovina for products that directly satisfy consumers' needs. The Consumer Price Index is used as a measure of inflation in the country. It serves for indexing wages and salaries in collective agreements, as well as for pensions and social welfare. It also serves to guarantee the value of recurrent payments in escalator clauses for contractual relationships. It enables a comparison of inflation in the country with inflation in other countries as well as a comparison of price movements within a particular country and regions, also it can serve as a basis for deflating national accounts data and other purposes. CPI is calculated on the basis of the representative list of products consisting of 626 different items in the year 2009. Each month over 21 000 prices are being collected in accordance with a defined sample of outlets on 12 geographical locations (5 towns in the Federation of BiH, 6 towns in Republika Srpska and in Brcko District). In comparison to year 2008, the average price level in year 2009 was lower by 0.4% due to the average price decrease in transport (-9.9%), clothing and footwear (-3.9%), food and non-alcoholic beverages (-0.9%) and education (-0.2%) divisions.
