1. FOREWORD

Bulletin „ Producer Price Index on domestic market of Bosnia and Herzegovina“ is a regular publication prepared by the Agency for statistics of Bosnia and Herzegovina and it contains a comprehensive overview of official statistical data on the movement of producer prices on domestic market of Bosnia and Herzegovina. The Bulletin is done within the regular activities of the Agency for statistics of Bosnia and Herzegovina on the aggregation and publication of data for the level of Bosnia and Herzegovina, with the main aim to meet relevant European standards of quality, timelines and comperability.

The data and methodological explanations presented in this Bulletin are the result of joint efforts of all three statistical institutes in Bosnia and Herzegovina : Federal Office of Statistics, Republika Srpska Institute of statistics and the Agency for statistics of Bosnia and Herzegovina and it's branch office of Brcko District. Within the CARDS Twinning Project „EU Tehnical assistance to the statistical system of B&H-Phase III“, funded by the European Union, we have recieved a consiredable help in the implementation of the unique methodology and data collection at the whole teritory of Bosnia and Herzegovina provided by Italian Statistical Office (ISTAT). We are using this opportunity to express our greatest gratitude to ISTAT for the efforts invested in our work.

By the Low on statistics of Bosnia and Herzegovina („Official Gazzette of B&H“ No. 34/2002), The BHAS is in charge of production and publishing of aggregated official statistics for the level of Bosnia and Herzegovina in accordance with the Internationally excepted methodology, using the data delievered by entities statistical offices and it's branch office in Brcko District. Data on Producer Price Indices on domestic market in Bosnia and Herzegovina have been collected uniformly since the year 2007, and the first results were published in January 2011 that was the starting point for the regular publication of the data for the level of Bosnia and Herzegovina.

This Bullitin is composed of several segments. At the begging we have presented the methodological explanations and definitions, the results for the year 2011, then the statistical tables and grapical analyses and glossary of used terms.

We would also like to use this opportunity to express our gratitude to the Federal Office for statistics, Republika Srpska Institute of statistcs and BHAS branch office in Brcko for providing the necessary data for this publication.

Director

Zdenko Milinović

Methodological explanations

2. METHODOLOGICAL EXPLANATIONS AND DEFINITIONS

2.1. Definition of Producer Price Index

Producer price index is a short-term statistical indicator that represents the measurement of change of prices of industrial products produced and sold by enterprises on the domestic market of Bosnia and Herzegovina.

The Producer price is a price for which producer sells his products to the regular costumers on the domestic market at maximum volume, franco loaded into a wagon (lorry) at the producers location. It includes reimbursements if applicable, and it excludes commercial rabbates, disscounts, VAT and excises.

2.2. Purpose

This statistical indicator serves as the measure of inflation. It can also serve as the indicator of economical perfomances, escalator in long-term contracts, deflator for output values, intermediate consumption, and capital consumption in National Accounts, and as a important tool in creating monetary and fiscal politics.

2.3. Producer Price Index for Bosnia and Herzegovina

PPI in Bosnia and Herzegovina is calculated based on the representative list of products and it's producers making a sample of cca.531 producers and 918 products. Each month 1854 prices are collected directly from producers throug the unique questionnaire created in cooperation with Italian experts.

2.4. Coverage of products and producers

The main criterion for selecting the sample of enterprises, products and services that are surveyed was the volume of production and selling on the domestic market got from the Annual survey on Industrial production (IND-21). Entities instites of statistics have created the sample of enterprises and products and the enterprises itself have chosen the items to be priced.

2.5. Data collection

All the data should be submitted to the Entities institutes each month for the period from 21th of the previous to the 20th of current month. The Entities Institutes completes the data entry process and calculates the PPI for the level of Entity and forward the indices to the Agency for statistics of B&H that calculates the index for the state level.

The form for data collecting containes the pre-filled rows from the Register of enterprises, clear description of products, PRODCOM code and detailed description of the products and items within. The enterprise has the obligation to fill the exact detailes of monitored items for which the price is delievered, the prices for previous and current month and the the reasons for price change if it occured.

2.6. Weights

Weights applied for the calculation of producer price index represent the relative share of selected products in the total value of sales of industrial products on the domestic market. Weights are based on the results of the Annual Survey on Industrial production (IND-21) for the year 2006, but for the state level the weights are based on the relative share of each Entity in the total production also from the year 2006. Each year the weights are price updated.

2.7. Classification

Classification of industrial products is based on the Nomenclature of Industrial Products in B&H 2005 (Official Gazette of B&H, No.19/06 from March 20,2006) based on the PRODCOM List 2005.

2.8. Aggregation

The first step in calculation of PPI is the calculation of elementary indices at the level of each products, that is the ratio between the current month price and the base price (from December of the previous year). After that the simple geometric mean is applied. The second step is the calculation of the indices of higher aggregates such as classes, divisions, subsections, sections and overall index using the Laspyeres's formula for the weighted arithmetic mean.

Results for the year 2011

3. DATA FOR THE LEVEL OF BOSNIA AND HERZEGOVINA FOR THE YEAR 2011

Since the collection of data necessary for the calculation of Producer Price Index for the domestic market of Bosnia and Herzegovina has started in December 2006, it was not possible to calculate the series of reference indices for the year 2005, that is currently used as the base year for the statistical surveys throughout the European Union. For the Year 2011, we have presented the data series of reference index for the domestic market of Bosnia and Herzegovina based on December 2006, whilst their analyses are oriented on the largest average monthly and annual movements of producer prices.

3.1. Producer Price Index on domestic market of Bosnia and Herzegovina for the year 2011

If we consider the average movement of the Producer Price Index for the domestic market of Bosnia and Herzegovina, in the year 2011 compared to the base (December 2006) we can see that we have recorded the increase of overall index by 11,1%.

If we take a look on the Main Industrial Groupings (MIG's) it is noticeable that we have recorded the average increase of prices of Energy and Intermediate consumption by 14,1%, of Capital products by 7,2%, of Consumer non-durables by 7,0% and of Consumer durables by 0,6%.

The significant price increase, in the same period, was recorded in Section C. Mining and quarrying by 22,2%, D. Manufacture by 10,7% and in E. Production and supply of Electricity, steam and hot water by 7,2%.

If we consider the subsection, the largest increase of prices in the surveyed period was recorded in DF. Manufacture of coke, refined petroleum products and nuclear fuel by 47,8%, whilst the largest price decrease was recorded in DB. Manufacture of textiles and textile products by 4,6%.

Glossary

5. GLOSSARY

Aggregate (of a classification): an activity or a commodity within the classification context. In a wide sense phenomena are appropriately classified in elementary items. These items are elementary aggregate.

Aggregate (of indices): the synthesis operation on indices. The aggregation of producer price indices manages price relatives and laspeyres indices up to overall indices.

Base price: the base price is the denominator of the ratio between the current price (numerator) and the base price.

Calculus indices: When indices are chained on a monthly base. The base price is the price of december of previous year.

Chain indices: indices constructed by chaining (multiplication) by linking coefficients.

Elementary price: price referred to a specific product manufactured by the enterprise, that can be synthesised by geometric mean in order to get the index of elementary product.

Enterprise: survey unit (respondent unit).

Frequency: the data collection frequency concerns the number of times at which the data are collected. The dissemination frequency concerns the data release times.

Micro data: elementary units defined as ratio between two prices: the current one and the base price.

Macro data: aggregated indices. Deals with product indices up to overall one.

Questionnaire: the form that is used for data collection..

Rates of change: the index rate of change between two times measures. The index increases (or decreases) during the period limited by these times. The month to month rate of change compares the index in the month m and $m-1$ of the same year y . The twelve month rate compares the index in the month m of the year y and its corresponding month m in the year $y-1$.

Reference year: the year for which index base is set to 100. The reference base for a chain index is the base that allows the comparison of the calculation base indices.

Weights system. Absolute values or value relatives that allow to calculate the producer price indices. For Bosnia and Herzegovina the main source of weights is the Annual survey on industrial production i.e. IND-21 survey that provides all the necessary SBS data and PRODCOM used to define the nested system of weights. In case of chained indices the weights are annually price updated.
