### Administrative structure of Bosnia and Herzegovina (BiH):

The Federation of Bosnia and Herzegovina (FBiH), Republika Srpska (RS), and Brcko District BiH (BD BiH).

The capital of Bosnia and Herzegovina is Sarajevo.

**The Federation of Bosnia and Herzegovina** is administratively divided into 10 cantons, and cantons are subdivided into municipalities and cities. **Republika Srpska** is administratively divided into municipalities and cities. **Brcko District of BiH** is a separate administrative unit.

In BiH there are three National parks and two Nature parks. National parks are Sutjeska, Kozara and Una. Nature parks are Hutovo Blato and Blidinje.

In the 2013 Census, the concept of “usual residents” was applied for the first time in order to determine the total number of population. Under this concept, a person shall be considered as a resident of the place at which s/he alone (in the case of a one-person household) or with members of her/his household spends most of time, that is, daily rest, irrespective of where the person's place of residence is registered. Therefore, the total population of a certain place includes persons who lived in that place for a continuous period of at least one year prior to the Census Critical Moment, and persons who at that particular moment lived there less than 12 months but intend to stay at that place for at least one year.

For the census conducted earlier in our country, before 1991, the official results referred to the so-called resident population, i.e. population who reside in the territory of Bosnia and Herzegovina, regardless of whether at the critical moment of the census, the persons were present at the place of residence or were temporary absent, in the country or abroad, due to some other reasons .

In the Population Census in 1961 and 1971 as a resident population persons were registered at the place where they worked at the Census moment, while in the 1981 and 1991 Census these persons were enumerated as a resident population in the places where their families lived.

**Natural change** is the difference (surplus or deficit) between the number of livebirths and the number of deaths in a given period.

**Births and deaths:** according to the legal regulations on registration, events of births and deaths are obligatory registered in population registers.

**A liveborn child** is every child that breathes at birth or shows any other signs of life (beating of the heart, pulsation of the umbilical cord, definite movements of voluntary muscles).

### Total fertility rate in BiH, 2007-2016

**The total fertility rate (TFR)** is the number of children that would be born alive to a woman during her childbearing years, if she were to pass through all her childbearing years conforming to the age-specific fertility rates of a given year.

**Stillborn** is considered a child delivered, or extracted from its mother displaying no signs of life, that is if it did not breath or display any other signs of life, and was carried longer than 22 weeks (approximately 6 months) with more than 500 g birthweight.

**Working age population** includes all persons of 15 years of age or older, divided in two basic categories: labour force (economically active) and economically inactive population. **The Labour Force**, or the active population, is composed of the employed and the unemployed persons. **The inactive** are all persons of 15 years of age or older who were not employed during the reference week and who during four weeks (the reference and the three preceding weeks) did not look for employment, as well as persons who were not ready to start work in following weeks should they be offered employment. **Methodological principles** behind the Labour Force Survey are based on the recommendations and definitions of the International Labour Organisation - ILO and the European Statistical Office - EUROSTAT.

**Structural business surveys** aim to collect, process and publish statistical data on the structure, competitiveness and characteristics of business entities and their results at different levels of activity.

**Number of enterprises** covers all enterprises engaged in market production and which are registered in the business register of the population that is the subject of observation.

**Number of persons employed** is defined as the total number of persons who work in the observation unit (including owners who work, partners working regularly in the unit and unpaid family members working regularly in the unit), as well as persons who work outside the unit to which they belong and which pays them (e.g. sales representatives, delivery personnel).

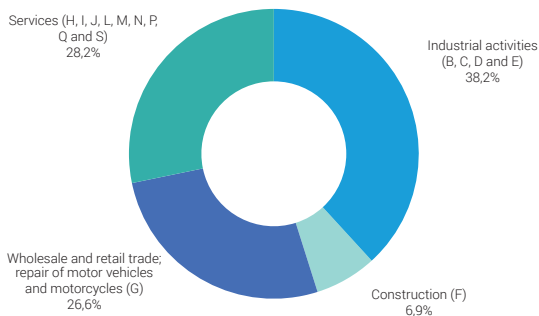

**Turnover** covers revenues calculated from sales of products, goods and services provided by reporting unit to third parties during the reference period.

**Value added at factor cost** is the gross income from operating activities after adjusting for operating subsidies and indirect taxes.

**Personnel costs** are the total remuneration, in cash or in kind, paid by the employer to an employee (regular and temporary employees as well as home workers) in return for work done by the employee during the reference period.

**Total purchases of goods and services** include the value of all goods and services purchased during the accounting period for resale or consumption in the production process, excluding capital goods the consumption of which is registered as consumption of fixed capital.

**Structure of the number of persons employed in the total of covered activities**

**Structure of value added at factor costs in the total of covered activities**

**Indicators** are calculated on the basis of the calculated values of the variables.

**Turnover per person employed** is obtained by dividing the total turnover with a total number of persons employed. This indicator expresses the ability of selling of business unit of specific activity.

**Value added per person employed** is obtained by dividing the total value added with a total number of persons employed. This indicator is used to measure productivity.

**Share of value added on the value of production** is obtained by dividing the total added value with a total value of production.

**Average personnel costs per employee** is obtained by dividing the total personnel costs with number of employees. This indicator shows average personnel costs in certain activity.

**Gross operating rate** represents the percentage of gross operating surplus in turnover.

## Industrial producer price indices in BiH, 2016 (Ø2011=100)

**Producer Price Index** is a short-term statistical indicator that represents the measurement of change of prices of industrial products produced and sold by enterprises. This statistical indicator serves as the measure of inflation. It can also serve as the indicator of macroeconomical performances, escalator in long-term contracts, deflator for output values, intermediate consumption, and capital consumption in National Accounts, and an important tool in creating monetary and fiscal politics. PPI in Bosnia and Herzegovina is calculated based on the representative list of products and its producers making a sample of cca. 531 producers and 918 products. Each month 1854 prices are collected directly from producers through the unique questionnaire. Since 1/1/2013 published indices are based on the average of 2011.

**Yield of fruit and grapes** is shown as granary yield of standard humidity after deducting all losses during the harvest and transportation.

**Trees and vines** of bearing age are those trees and vines capable of bearing fruit under standard conditions, regardless of whether or not they bore fruit during reporting year.

**Yield per tree or per vine** is computed for the bearing trees or vines.

**Utilised agricultural area** is total area taken up by arable land, permanent grassland (meadows and pastures), permanent crops and kitchen gardens, used by the holding regardless of the type of tenure or whether it is used as common land.

**Harvested area** is the part of the cropped area that is harvested. It can therefore be equal to or less than the cropped area.

**Harvested production** is total production, including on-holding losses and wastage, quantities consumed directly on the farm and marketed quantities, indicated in units of basic product weight.
