YEAR VII

SARAJEVO, 28.10.2020.

NUMBER: 9

BUSINESS STATISTICS

RETAIL TRADE TURNOVER INDICES IN BIH, AUGUST 2020.

The total seasonally adjusted retail trade turnover in BiH in September 2020, observed in current prices, increased by 9.2% compared to August 2020. An increase in turnover was recorded in trade in food products (food, beverages and tobacco products) in the amount of 10.2%, while in trade in non-food products there was an increase in turnover in the amount of 7.7%.

Observed in constant prices, the total seasonally adjusted retail trade turnover in BiH in September 2020 increased by 8.7% compared to August 2020. An increase in turnover was recorded in trade in food products (food, beverages and tobacco) in the amount of 10.4%, while in trade in non-food products an increase in turnover in the amount of 7.0% was recorded.

The total retail trade turnover index in BiH in September 2020 achieved a nominal growth of 17.8% while the real growth amounted to 20.8% compared to the base (2015) year.

Data are seasonally adjusted.

Indices of Retail Trade Turnover, seasonally adjusted series BiH, 2015=100

Total retail trade turnover in BiH, measured in current prices, decreased by 6.2% in September 2020 as compared to the same month of previous year. Turnover of consumables (food, beverages and tobacco) decreased by 0.3%, while the turnover of durables (non-food sector) showed an increase of 1.5%, compared to September 2019.

Retail trade turnover in BiH, measured in constant prices, recorded a decrease by 4.3% compared to September 2019. The turnover of consumables decreased by 2.7%, while turnover of durables showed a decrease of 0.6%, compared with the same month of previous year.

Data are working day adjusted.

Annual Growth Rates in Retail Trade, working day adjusted series BiH

Volume indices of consumable goods in September 2020, compared to the base year (2015), showed an increase by 27.8% and base indices of durable goods recorded an increase of 30.7%. Retail trade turnover of automotive fuel decreased by 5.7%.

Data are seasonally adjusted.

METHODOLOGY NOTES

Aim of survey

The purpose of the monthly retail trade survey is getting timely information on change of level of realized turnover (in nominal and real terms) and other relevant indicators in the field of retail trade in BiH. Retail trade turnover index is one of the key indicators of economic activity in the country, which helps government bodies, and private sector enterprises in the decision-making process. It is also applied for the estimation of retail trade sector output, household consumption, as well as in the calculation of national accounts.

Survey methodology is completely harmonized with the one prescribed by Council Regulation (EC) No. 1165/98 concerning short-term statistics from the 1998 and its amendments (hereinafter EU STS regulation) and with Eurostat recommendations for this statistical area.

Coverage

The survey comprises business entities /legal units which are, by the main activity, registered within retail trade, except retail trade of motor vehicles and motorcycles (division 47 - KD BiH 2010), and businesses which are, according to their main activity, classified in other activities, but also performing retail trade. For the purpose of the survey, Classification of Activities in Bosnia and Herzegovina - KD BiH 2010 was used, and it is fully compliant with the European Classification of Economic Activities - NACE Rev. 2. Survey covers the entire territory of Bosnia and Herzegovina. Entrepreneurs are not included.

Sample design

In conducting survey on retail trade in BiH the combined method of full coverage and stratified random sampling is used. The sample is divided into strata according to the BiH's entity to which the business entity belongs, class of financial data (financial report of the previous year) and the activity of business entity (division 47-KD BiH 2010). As an additional stratification variable, the number of employees is used. The chosen sample on retail trade in 2020 is representative at the level of Bosnia and Herzegovina and at the level of the Federation of BiH, Republika Srpska and District Brčko.

Data collection and processing

In conducting the survey, participate the three statistical institutions in BiH. The main observation variable is monthly turnover of business entity, excluding VAT, which is in accordance with EU-STS regulation separately stated. Data collected from the reporting units, using the form M KPS TRG 01, is the basis for the evaluation data for the total population. Aggregation of turnover at higher levels (group, division, special aggregates) of activity is carried out prior to the compilation of indices.

Index compilation

Retail trade indices are calculated compared with the new base year (2015), which is revised every five years according to the EU-STS regulations, and are shown in real and nominal terms. Value index of Retail trade is expressed in current prices (unadjusted for price change). For users of statistical data it is very important to follow the evolution of phenomena in time and for these purposes we use volume index of retail trade. Volume index is expressed in constant prices, and it is calculated by deflating retail trade turnover by adjusted consumer price index (CPI).

Seasonal and working day adjustment of index

Statistical institutions in BiH, taking into account data dissemination in the EU, are publishing indices in the following forms:

- original (unadjusted) indices,
- seasonally adjusted indices – deseasoned indices (SA – seasonally adjusted) and
- calendar adjusted indices (WDA- working-day adjusted)

Since the seasonally and calendar adjusted indices are far more significant and representative for the users of statistical data, they are listed in tabular form.

Seasonal adjustment means that the data are adjusted for seasonal influences and calendar days. Monthly indices and growth rates are, according to Eurostat's recommendations, presented and interpreted in seasonally adjusted form.

Calendar adjustment implies that the data are adjusted for the impact of calendar and workdays. The data that are compared with the data from the same period of the previous year are presented and interpreted in the calendar-adjusted form of an index or growth rate. When these calendar effects significantly affect the observed time series, it is necessary to remove them.

Calendar and seasonal adjustment is performed in JDemetra+ application (version 2.2.0) using the TRAMO-SEATS method in the series of monthly data and in accordance with the Eurostat guidelines. Because of the characteristics of applied method for adjustment, adding new monthly observations in the series may lead to a certain changes to the earlier, already published seasonally and calendar-adjusted index series.

Data dissemination

Results of the survey are expressed in the form of indices and growth rates and since January 2014 are published on a regular monthly basis in the form of press releases on the website of the Agency for Statistics of BiH (www.bhas.gov.ba). The presentation and interpretation of the index is completely in line with those prescribed by EU-STS regulation allowing national and international users to compare the BiH retail trade index with indices of other countries.

Data revision

Regular press releases on retail trade are published in the monthly dynamics and contain preliminary data. Data revision implies that the data for the previous month (t-1) are revised in accordance with new information, and it is possible that the data published after revision differ from previously published, preliminary data. In the press release is clearly stated on which data are used so that users of statistical data can properly interpret them. For any change of the data and the reasons for doing that, users will be informed in an appropriate and transparent manner, in regular monthly press releases and other publications for the public as well as on the website of the Agency for Statistics of BiH.

Definitions

Turnover is the total invoiced amount that an business entity invoice to third parties for goods sold or service provided in the retail trade during the reference period, and it corresponds to the market value. Includes costs associated with the sale, such as transportation, packaging, etc. that are transferred to the customer, even if these amounts are stated separately on invoices. Value Added Tax (VAT) is excluded from the turnover.

Turnover of retail trade activities includes the value of all goods sold to individuals for personal use or use in household in the observed period.

- The turnover of consumables includes turnover generated by business subjects registered in the activities 47.11 and 47.2. (mainly food, beverages and tobacco products).

- The turnover of non-food products includes various retail goods that business subjects registered in the activities of 47.19, 47.4-47.9 generated.

Turnover of other activities includes the value of all goods sold and services provided on the market (wholesale, mediation in wholesale trade, hotels and restaurants, transport and other activities).
