NUMBER 2

BUSINESS STATISTICS

DISTRIBUTIVE TRADE TURNOVER INDICES IN BIH, II QUARTER 2023

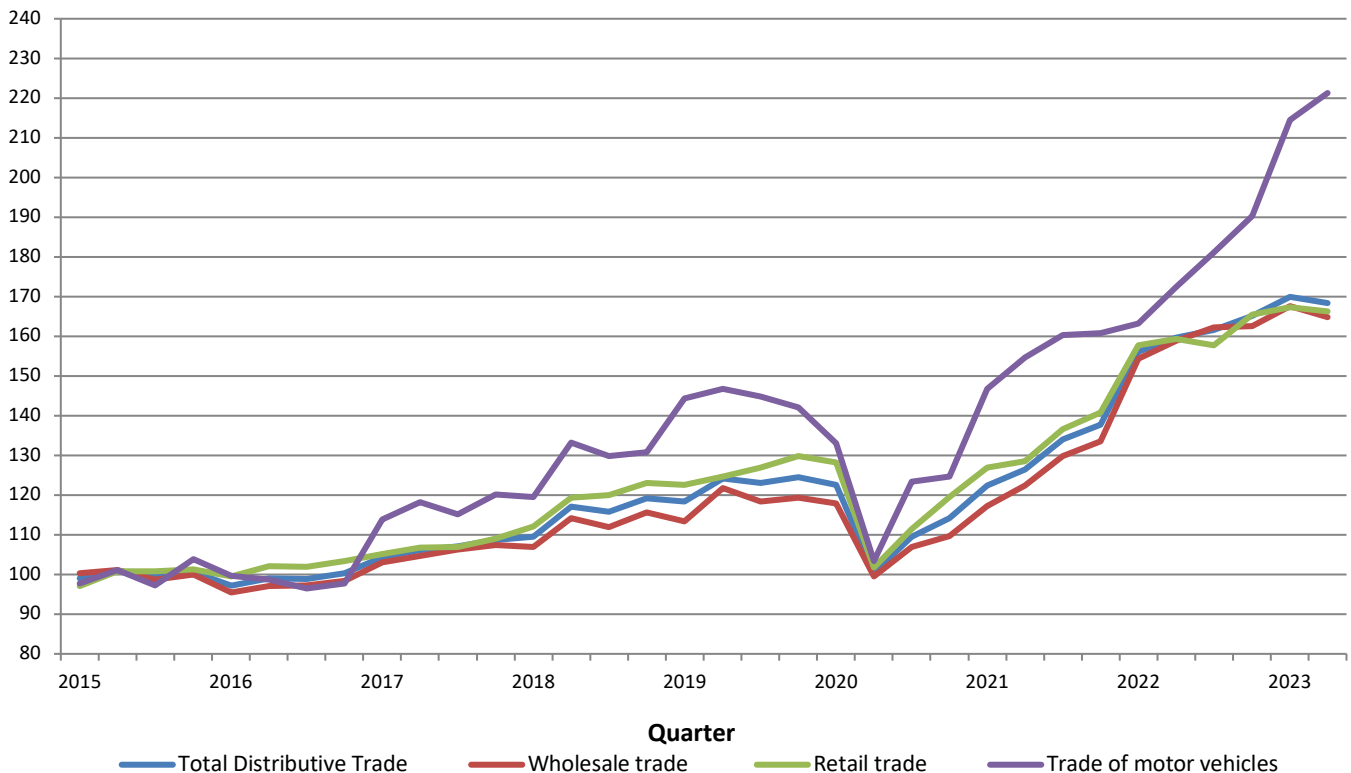

The total seasonally adjusted turnover of distributive trade in the second quarter of 2023 in Bosnia and Herzegovina recorded a decrease of 0.9% compared to the first quarter of 2023. Growth in turnover was achieved in wholesale and retail trade in motor vehicles and motorcycles in the amount of 3.2%, while a decrease in turnover was recorded in the areas of wholesale trade by 1.6% and in retail trade in the amount of 0.6%.

The largest increase in turnover was achieved in the activity of wholesale trade in machinery, equipment and accessories in the amount of 23.0%, while the largest decrease in turnover was recorded in the activity of wholesale trade for a fee or on the basis of a contract in the amount of 9.0%.

The turnover index of distribution trade in BiH in the second quarter of 2023 achieved a growth of 68.4% compared to the base year (2015). Growth in the turnover index was achieved in wholesale and retail trade in motor vehicles and motorcycles by 121.3%, wholesale trade 64.9% and retail trade 66.3% compared to the base (2015) year.

The given data are seasonally adjusted.

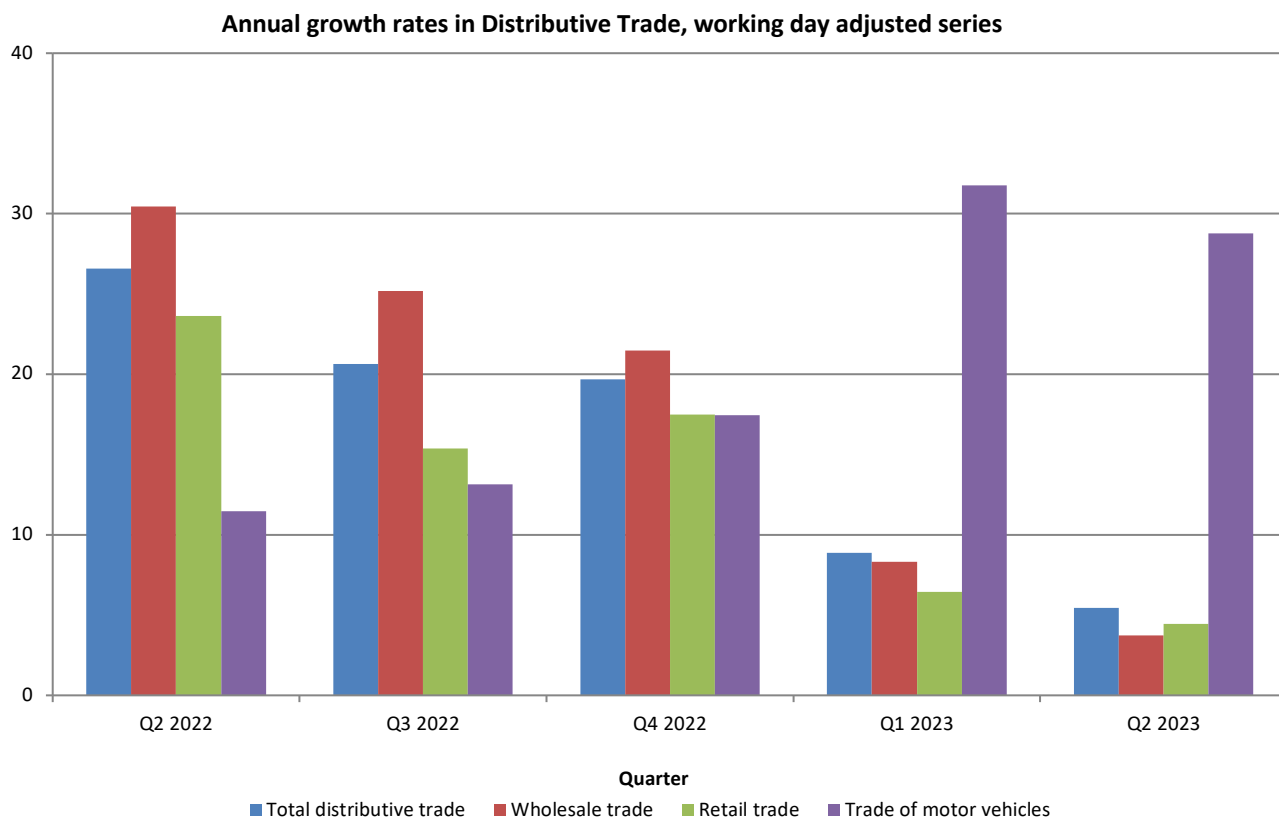

Indices of Distributive Trade Turnover, seasonally adjusted series BiH, 2015=100

The total turnover of distributive trade in BiH, calendar adjusted, in the second quarter of 2023 achieved growth in the amount of 5.4% compared to the same quarter of the previous year. Growth in traffic was achieved in wholesale and retail trade in motor vehicles and motorcycles by 28.8%, wholesale trade by 3.7% and retail trade by 4.4%.

The largest increase in turnover was achieved in the activity of maintenance and repair of motor vehicles in the amount of 52.1, while the largest decrease was recorded turnover recorded in the activity of retail motor fuels in specialized stores in the amount of 15.1%.

Data are working day adjusted.

In the structure of total trade turnover (original, unadjusted data) in the second quarter of 2023, the largest participation was achieved in wholesale trade (55.9%), followed by retail trade (37.1%) and trade and maintenance motor vehicles and motorcycles (7.0%).

47.6	Retail sale of cultural and recreation goods in specialised stores
47.7	Retail sale of other goods in specialised stores
47.8	Retail sale via stalls and markets
47.9	Retail trade not in stores, stalls or markets

METHODOLOGY NOTES

Aim of the survey

Services statistics take an important place in the national economy and have a major role in recent decades. The reason for this is the large number of business entities engaged in services, especially in trade activities, and the fact they have a significant contribution in realized turnover of BiH.

Primary goal of distributive trade statistics is to provide timely information on change of level of realized turnover and other relevant indicators. The distributive trade turnover index is one of the key indicators of economic activity in the country, which helps government bodies, and private sector enterprises in the decision-making process. It is also applied for the estimation of trade sector output, household consumption, as well as in the calculation of national accounts. Survey methodology is completely harmonized with the one prescribed by Council Regulation (EC) No.1165/98 concerning short-term statistics from the 1998 (Annex D) and its amendments (hereinafter EU STS regulation) and with Eurostat recommendations for this statistical area.

Coverage

The survey comprises business entities /legal units which are, by the main activity, registered within trade activity (section G- KD BiH 2010), and in minor extent businesses which are, according to their main activity, classified in other activities (industry, construction, hotels and restaurants etc.), but also perform trade activities. For the purpose of the survey, Classification of Activities in Bosnia and Herzegovina - KD BiH 2010 was used, and it is fully compliant with the European Classification of Economic Activities - NACE Rev. 2. The survey covers the entire territory of Bosnia and Herzegovina. Entrepreneurs are not included.

Sample design

In conducting survey on distributive trade in BiH the combined method of full coverage and stratified random sampling is used. The sample is divided into strata according to class of financial data (financial report of the previous year) and the activity of business entity (divisions 45, 46 and 47-KD BiH 2010). As an additional stratification variable, the number of employees is used. The chosen sample on distributive trade in 2021 is representative at the level of Bosnia and Herzegovina and at the level of the Federation of BiH, Republic of Srpska and District Brčko.

Data collection and processing

The three statistical institutions in BiH participate in conducting the survey. The main observation variable is the quarterly turnover of business entity, excluding VAT, which is in accordance with EU-STS regulation separately stated. Data collected from the reporting units, using the form K KPS TRG 02, is the basis for the evaluation data for the total population. Aggregation of turnover at higher levels (division, section or special aggregates) of activity is carried out prior to the compilation of indices.

Index compilation

Distributive trade indices are calculated compared with the new base year (2015), from the first quarter 2018, which is revised every five years according to the EU-STS regulations. EU Regulation (EC) No 472/2008 prescribes the application of 2015 as a base year, starting from January 2018 in all EU member states. Value index of distributive trade is expressed in current prices (unadjusted for price change).

Seasonal and working day adjustment of index

The statistical institutions in BiH, considering data dissemination in the EU, are publishing indices in the following forms:

- original (unadjusted) indices,
- seasonally adjusted indices – (SA – seasonally adjusted) and
- calendar adjusted indices (WDA- working-day adjusted)

Since the seasonally and calendar adjusted indices are far more significant and representative for the users of statistical data, they are listed in tabular form.

Seasonal adjustment means that the data are adjusted for seasonal influences and calendar days. Quarterly indices and growth rates are, according to Eurostat's recommendations, presented and interpreted in seasonally adjusted form.

Calendar adjustment implies that the data are adjusted for the impact of calendar and workdays. The data that are compared with the data from the same period of the previous year are presented and interpreted in the calendar-adjusted form of an index or growth rate. When these calendar effects significantly affect the observed time series, it is necessary to remove them.

Calendar and seasonal adjustment are performed in the JDemetra+ application (version 2.2.1) using the TRAMO-SEATS method in the series of monthly data and in accordance with the Eurostat guidelines.

Because of the characteristics of the applied method of adjustment, adding new quarterly observations in the series may lead to a certain change to the earlier, already published seasonally and calendar-adjusted index series.

Data dissemination

The results of the survey are expressed in the form of indices and growth rates and since 2014 are published on a regular quarterly basis in the form of press releases on the website of the Agency for Statistics of BiH (www.bhas.gov.ba). The presentation and interpretation of the index are completely in line with those prescribed by EU-STS regulation allowing national and international users to compare the BiH distributive trade index with indices of other countries.

Data revision

Regular press releases on distributive trade are published in the quarterly dynamics and contain preliminary data. Data revision implies that the data for the previous quarter (t-1) are revised in accordance with new information, and it is possible that the data published after revision differ from previously published, preliminary data. In the press release is clearly stated on which data are used so that users of statistical data can properly interpret them. For any change of the data and the reasons for doing that, users will be informed in an appropriate and transparent manner, in regular quarterly press releases and other publications for the public as well as on the website of the Agency for Statistics of BiH.

Definitions

Turnover is the total invoiced amount that a business entity invoice to third parties for goods sold or service provided in the retail trade during the reference period, and it corresponds to the market value. Includes costs associated with the sale, such as transportation, packaging, etc. that are transferred to the customer, even if these amounts are stated separately on invoices. Value Added Tax (VAT) is excluded from the turnover.

Distributive trade consists of all types of trade activities, from supplying goods from the producer to distributing them to the final consumer. It comprises wholesale trade on own account, wholesale on a fee or contract basis, retail trade and repair of motor vehicles and motorcycles and personal and household goods.

Wholesale trade is an activity of sale and resale of goods to industrial, trading and professional users and organisations as well as to other business entities engaged in wholesale and retail trade. It also includes transit goods trade (sales of goods, which is by a vendor's order directly delivered to a customer without being previously stored at the salesman's).

Retail trade includes the sale of goods to final consumers or households (for personal consumption or for using in household).
