METHODOLOGY NOTES

Aim of survey

The purpose of the monthly retail trade survey is to obtain timely information on changes in the level of realized turnover (nominal and real values) and other relevant indicators from the field of retail trade in BiH. The retail trade turnover index is one of the key indicators of the country's economic activity that helps state administration bodies and private sector companies in the decision-making process. In addition, it is applied for estimation of the retail trade sector output, final consumption, as well as in the calculation of national accounts.

The survey methodology is fully harmonized with that prescribed by the new Regulation (EU) 2019/2152 of the European Parliament and the Council on European business statistics (hereinafter EBS regulation) as well as Eurostat's recommendations for short-term business statistics.

Coverage

The survey covers business entities/legal entities that are, by the main activity, registered in SBR for performing the activity of retail trade, except for the sale of motor vehicles and motorcycles (division G47 - KD BiH 2010), and in a minor extent, business entities that, according to their main activity, are classified in other activities, but also performing retail trade activities. For the purposes of the survey, the Classification of Activities of Bosnia and Herzegovina - KD BiH 2010 was used, which is fully harmonized with the European Classification of Economic Activities NACE Rev.2. Survey covers the entire territory of Bosnia and Herzegovina. Entrepreneurs are not included in the survey.

Sample design

In conducting survey on retail trade in BiH the combined method of full coverage and stratified random sampling is used. The sample is divided into strata according to the entity to which the business entity belongs, the class of financial data (financial report for the previous year) and the activity of the business entity (division G47 - KD BiH 2010). The number of employees is used as an additional stratification variable. The selected sample on retail trade for the year 2024 is representative at the level of Bosnia and Herzegovina, as well as at the levels of the Federation of BiH, Republika Srpska and Brčko District of BiH.

Data collection and processing

All three statistical institutions in Bosnia and Herzegovina participate in conducting the survey. The main observation variable is the monthly turnover of the business entity without VAT, which is reported separately in accordance with the EBS regulation. The data collected from the reporting units, using the form M KPS TRG 01, is the basis for estimating data for the total population. Aggregation of turnover to higher levels (group, division, special aggregates) of activity is carried out before the compilation of the indices.

Compilation of indices

Retail trade turnover indices are calculated compared with the base (2021) year, are applied in the index calculation from January 2024 and are shown in nominal and real values. Regulation (EU) 2019/2152 prescribes the application of the base year (2021) from January 2024 in EU member states. Value index of retail trade is expressed in current prices (the influence of price changes has not been removed). It is very important for users of statistical data to follow the dynamics of the phenomena over time, and for that purpose we use the volume index of retail trade. Volume index of retail trade is expressed in constant prices, and it is calculated by deflating retail trade turnover by adjusted Consumer Price Index (CPI).

Seasonal and working day adjustment of indices

Statistical institutions in BiH, taking into account data dissemination in the EU, are publishing indices in the following forms:

- original/gross (unadjusted) indices,
- seasonally adjusted indices and
- working-day adjusted indices

Since the seasonally and working-day adjusted indices are far more significant and representative for the users of statistical data and they are listed in tabular form.

The term seasonal adjustment means that the data are adjusted for both seasonal and working-day effects. Monthly indices and growth rates are, according to Eurostat's recommendations, presented and interpreted in seasonally adjusted form.

The term working-day adjusted indices indicate that the data are adjusted only for working-day effects. The data that are compared with the data from the same period of the previous year are presented and interpreted in the working-day adjusted form of an index or growth rate. When these working-day effects significantly affect the observed time series, it is necessary to remove them.

Working-day and seasonal adjustment is performed in JDemetra+ application (version 2.2.0) using the TRAMO-SEATS method in the gross series of monthly data in accordance with the Eurostat guidelines. Because of the characteristics of applied method for adjustment, adding new monthly observations in the series may lead to certain changes to the earlier, already published seasonally and working-day adjusted index series.

Data dissemination

Results of the survey are expressed in the form of indices and growth rates and since January 2014 are published on a regular monthly basis in the form of press releases on the website of the Agency for Statistics of BiH (www.bhas.gov.ba). The presentation and interpretation of the index is completely in line with those prescribed by EBS regulation allowing national and international users to compare the BiH retail trade index with indices of other countries.

Data revision

Regular press releases on retail trade are published in the monthly dynamics and contain preliminary data. Data revision implies that the data for the previous month (t-1) are revised in accordance with new information, and it is possible that the data published after revision differ from previously published, preliminary data. In the press release is clearly stated on which data are used so that users of statistical data can properly interpret them. For any change of the data and the reasons for doing that, users will be informed in an appropriate and transparent manner, in regular monthly press releases and other publications for the public as well as on the website of the Agency for Statistics of BiH.

Definitions

Turnover is the total invoiced amount that a business entity invoice to third parties for goods sold or service provided in the retail trade during the reference period, and it corresponds to the market value. Includes costs associated with the sale, such as transportation, packaging, etc. that are transferred to the customer, even if these amounts are stated separately on invoices. Value Added Tax (VAT) is excluded from the turnover.

Turnover of retail trade activities includes the value of all goods sold to individuals for personal use or use in household in the observed period.

- The turnover of consumables includes turnover generated by business subjects registered in the activities 47.11 and 47.2. (mainly food, beverages and tobacco products).

- The turnover of durables (non-food products) includes various retail goods that business subjects registered in the activities of 47.19, 47.4-47.9 generated.

Turnover of other activities includes the value of all goods sold and services provided on the market (wholesale, mediation in wholesale trade, hotels and restaurants, transport and other activities).
